CHARAN REDDY YAKKANTI

Charlotte, NC 28027 • (704) 652-8170 • charanreddy.business@gmail.com
linkedin.com/in/charan-reddy-yakkanti-966712321

Target Role: Product Engineering Intern

SUMMARY

Computer Science and Finance student building multi-agent systems at an early-stage startup. Works on the coordination layer where software has to carry out real business operations, drawing on hands-on experience in Python, machine learning and robotics alongside client-facing work. Comfortable translating technical tradeoffs for people who do not share the technical background.

EDUCATION

University of North Carolina at Charlotte

B.S. Computer Science & B.S. Finance (Dual Degree) | GPA 3.6 | Expected May 2028

Coursework: Data Structures & Algorithms, Corporate Finance, Professional Selling.

EXPERIENCE

VibeGrow • Product Engineer

September 2026 to Present

- Build multi-agent coordination systems for a pre-launch startup developing agent swarms that research, build and operate businesses autonomously.
- Develop orchestration logic that lets multiple agents share state and divide work across research, product and operations functions.
- Work on how agents hand off context mid-task, so downstream agents act on current state rather than decisions that have since changed.

Tabner Inc • Recruitment & Client Services Intern

April 2024 to August 2024

- Ran needs discovery with clients and senior consultants to write job descriptions matched to each client's hiring goals.
- Sourced and screened candidates against client requirements, coordinating interviews end to end.
- Researched hiring trends and presented findings that shaped consultant recruitment strategy.

PROJECTS

F1TENTH Autonomous Racing • Team Developer

January 2025 | ROS, Python

- Built a 1/10-scale autonomous race car for path planning, obstacle avoidance and real-time sensor processing.
- Tuned PID control and localization through repeated test-and-failure cycles; integrated LIDAR, IMU and camera hardware with the software stack.

Route Optimization System

Python, OR-Tools, Flask, Folium

- Logistics routing tool using Dijkstra's, A* and genetic algorithms under real-world constraints including traffic and delivery windows.
- Built a Flask and Folium interface so non-technical users could test and validate solutions directly.

Machine Learning Projects

Python, PyTorch, TensorFlow

- 3D mesh reconstruction from point-cloud data using PointNet and graph neural networks.
- Tool converting 2D architectural plans into 3D AutoCAD models; low-cost ML-driven bot for collecting floating waste.

LEADERSHIP

IBM Z Ambassador

September 2026 to Present

- Selected for IBM's student ambassador program in enterprise computing, run in partnership with Your Big Year. Completed the IBM Z Xplore Concepts certification.

SKILLS

Languages and tools: Python, Java, SQL, Git, ROS, PyTorch, TensorFlow, AutoCAD
Analysis: Excel, data analysis, financial analysis, market research
Client-facing: needs discovery, technical demos, presenting to non-technical audiences
